EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Louis Troilo (Registration No.45,284) on June 21, 2006.

The application has been amended as follows:

In claim 23, line 4, "wherein the superelastic alloy is entirely in the austenitic phase, with no appearance of stress-induced martensite while under applied stress, when the intraluminal element is positioned in the human body" has been *replaced* with --wherein a martensite deformation temperature (M_d) of the alloy is below 37 degrees C--.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: The allowed claims are directed toward a superelastic alloy have a M_d below human body temperature (37 degrees C), therefore, the alloy when placed in the body would not be able to exhibit a transformation back into the martensite phase and would loose it's superelastic property at this temperature. The claims in the instant application have not been rejected using prior art because no references, or reasonable combinations thereof, could be found which disclose or suggest the above features.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
